Anomaly Detection

#	Anomaly Description
1	High Null Values Detected (165)
2	High Duplicate Records Detected (60)

■ AI-Generated Insights

Executive Summary (1):

The provided dataset reveals a robust revenue stream for the company, with total revenues reaching \$57,992,865 across various products and cities within our top categories such as Electronics, Audio, Accessories, Mobile, and Computers. The average revenue per sale stands at approximately \$119,572.92, indicating a strong sales performance with the highest single transaction being worth \$392,310.00. Our product portfolio shows that Tablets are leading in terms of units sold (69), followed by Keyboards and Monitors closely behind at 55 and 54 respectively. This suggests customer preference trends towards these products which can be leveraged for marketing strategies.

Data Quality Insights (2):

The dataset contains a total of 500 rows with duplicates accounting for 60 instances, representing potential inefficiencies or errors that could skew analysis and decision-making processes if not addressed promptly. Additionally, there are 165 null values across various columns which may indicate incomplete data collection methods
